

DBMS Lab Record

Ananya Rao | 22CS001 | CSE 3A

Experiment 1: ER model for a college canteen

Experiment 2: Normalisation to 3NF

Experiment 3: SQL joins

```
SELECT s.name, o.token_no FROM student s  
JOIN orders o ON o.student_id = s.id;
```

Result: verified on the lab server.

Experiment 4: Transactions

```
BEGIN; UPDATE menu SET stock = stock - 1;  
COMMIT;
```

Observation: concurrent updates serialise.

Experiment 5: Indexing

```
CREATE INDEX idx_roll ON student(roll_no);
```

Conclusion: lookups drop from a scan to an index seek.
